

# DOING YOUR LAUNDRY

UniFirst® Corporation Tracks Custom Energy Metrics

Based in Massachusetts, UniFirst designs, manufactures, sells, rents, cleans, and delivers uniforms and protective clothing.

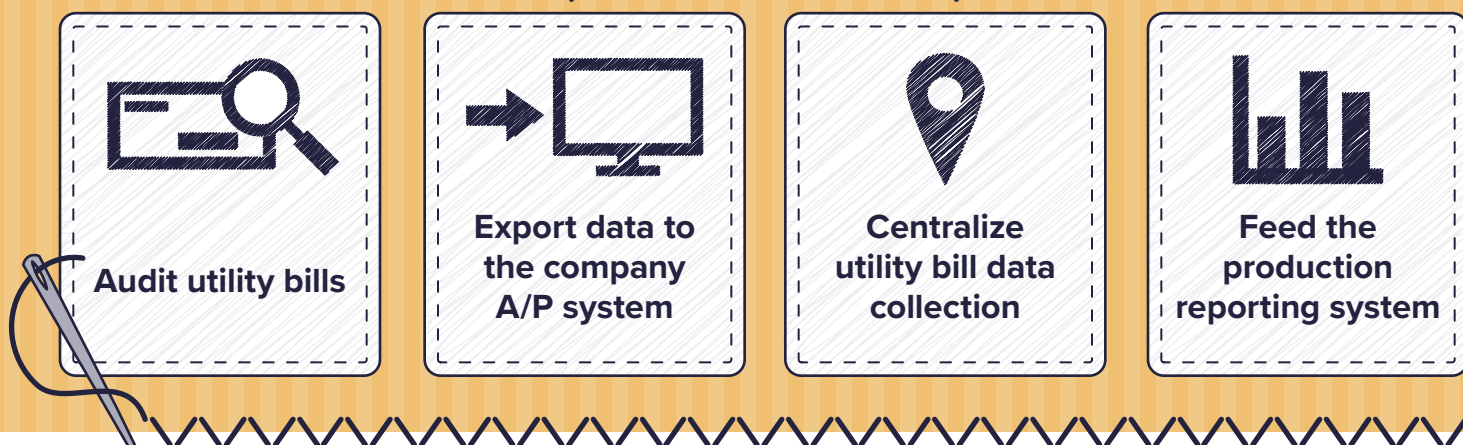

With 260+ locations across U.S. and Canada, it was difficult to track energy rates for multiple vendors. Plus, a decentralized utility bill pay process caused confusion in managing hundreds of accounts.

## UniFirst needed to keep track of:

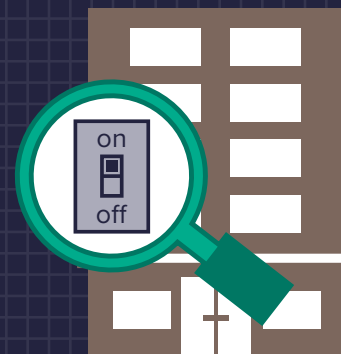

## UniFirst invested in EnergyCAP to:

Lisa Roberts, Manager of Engineering Administration, estimates that UniFirst had saved enough money in the first two years using EnergyCAP to achieve full payback for their implementation costs.

Since implementation, Roberts and her team have been able to devote more time and attention to conserving resources by:

1. identifying inefficient facilities
2. determining the cause(s)
3. modifying that facility's energy practices

This system is used by engineering staff and management at all U.S. and Canada locations.

EnergyCAP has helped transform their energy and utility bill management programs.
